Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents GTFB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (GTF) B polypeptide having changes at position from I D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC thermoplastic molecule or their combinations or glucan and starch where CC the glucan is produced in the amyloplast and/or vacuole or a maize line CC deficient in starch biosynthesis, transformed with a gene encoding a CC glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan (paper sizing/coating agent). The vector is useful CC for producing a glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant cell under plant growing CC conditions to produce a regenerated plant and inducing expression of the CC polynucleotide for a time sufficient to produce the glucan in the CC regenerated plant, where the vector contains a transit sequence from CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and CC chlorophyll AB binding protein to produce a transgenic plant, and glucan CC clucans are useful as substitutes for and additions to modified starch CC and latexes in paper manufacture. Unlike prior art techniques, which CC require input materials that produce Abenical effluents, paper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Glucosyltransferase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S. mutans glucosyltransferase GTFB mutant

Also included are a glucan produced by the GTF mutant, CC an isolated polymucleotide which encodes D or P2, or its complementary CC an isolated polymucleotide which encodes D or P2, or its complementary CC polymucleotide which encodes D or P2, or its complementary CC polymucleotide which encodes D or P2, or its complementary CC polymucleotide which encodes D or P2, or its complementary CC polymucleotide with the expression cassette, host cell introduced with the vector, a transgenic plant, a paper sixing and/or coating composition comprising the expression cassette, host cell circums of the polymucleotide of the sixing and/or coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucosyptransferase B or D enzyme, wild-type or mutant and a paper comprising the glucan in a plant. The method comprises transforming a glucosyptransferase B or D enzyme, wild-type or mutant and a paper comprising the glucan in a plant to produce the plant growing a plant cell winder plant growing to plant cell winder plant growing a conditions to produce a regenerated plant and inducing expression of the comprising the glucan in a plant transgenic plant, and glucan in the growing the plant to produce the glucan in the comprising expression of the comprision of the paper will be produced by GTP, which utilises to produced in the amyloplast of potato or the vacuole of sugar beet.

CC and latexes in paper manufacture. Unlike prior att techniques, whic

The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from 1448V, D457N, D567T, K1014T, D457N/D57T, D567T/D571K, D567T/D571K, D567T/D571K/K1014T, 1448V/D457N/D567T/D571K/K779Q/K1014T, Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589D, and N471D/T589E. Also included are a glucan produced by the GTF mutant, an isolated polymucleotide which encodes P1 or P2, or its complementary polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the polymucleotide operably linked to promoter, a vector comprising the expression cassette, host cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                key Location/Qualifiers Misc-difference 457

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC deficient in starch biosynthesis, transformed with a gene encoding a CC glucosyltransferage B or D enzyme, wild-type or mutant and a paper CC comprising the glucan (paper sizing/coating agent). The vector is useful CC for producing a glucan in a plant. The method comprises transforming a CC conditions to produce a regenerated plant and inducing expression of the CC polynucleotide for a time sufficient to produce the glucan in the CC regenerated plant, where the vector contains a transit sequence from CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and CC chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. CC Glucans are useful as substitutes for and additions to modified starch CC and latexæs in paper manufacture. Unlike prior art techniques, which CC require input materials that produce chemical effluents, paper CC manufacture utilising the glucan produced by GTF, which utilises CC biologically produced input materials, is more cost-effective and CC properties and impart gloss to the paper during coating step.

CC The present sequence represents a GTFB mutant of the invention.

CC Wote: The present sequence is not shown in the specification but can be information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CR NATID/TSSEE Also included are a glucan produced by the GTF mutant, an isolated polynucleotide which encodes P1 or P2, or its complementary copolynucleotide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the polynucleotide operably linked to a compression cassette comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed coating composition the mutant GTF, wild type or starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan (paper sizing/coating gent). The vector is useful comprising the glucan in a plant The method comprises transforming a composition to produce a regenerated plant and inducing expression of the conditions to produce a regenerated plant and inducing expression of the conditions to produce a regenerated plant and inducing expression of the conditions are useful as substitutes for and additions to modified starch can latexes in paper manufacture. Unlike prior art techniques, which crequire input materials that produce chemical effluents, paper substitutes for and additions to modified starch can latexes in paper manufacture. Unlike prior art techniques, which crequire utilising the glucan produce down or the vacuole of sugar beet. Composition in paper manufacture. Unlike prior art techniques, which crequire and impart gloss to the paper during costing step.

CC manufacture utilising the glucan produce down the specification but as created by the indexer using the GTF mutant of the invention.

CC manufacture and impart gloss to the paper during coating as AAU98227 and the inferentials indexer using the GTFB mutant of the invention.
                                                                                                                                                                                                                                                                               멍
                                                                                                                                                                                                                                                                                                                                           Š

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step.

The present sequence represents a GTFB mutant of the invention.

Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 was created by the indexer using the GTFB sequence appearing as AAU98027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC NATIDITISES. Also included are a glucan produced by the GTF mutant, CC an isolated polynucleotide which encodes Pl or P2, or its complementary CC polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, CC an expression cassette comprising the polynucleotide operably linked to a promoter, a vector comprising the expression cassette, host cell CC introduced with the vector, a transgenic plant comprising the compositing the comprising plant comprising the vector, a transgenic plant comprising and/or coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, Ct thermoplastic molecule or their combinations or glucan and starch where CC the glucan is produced in the amyloplast and/or vacuole or a maize line CC deficient in starch biosynthesis, transformed with a gene encoding a glucan in starch biosynthesis, transformed with a gene encoding a CC comprising the glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing CC conditions to produce a time sufficient to produce the glucan in the conditions to produce a time sufficient to produce the glucan in the CC regenerated plant, where the vector contains a transit sequence from CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and contains a practice and contains and allocan contains a transit sequence from CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and contains a transit sequence from CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and contains a transit sequence from CC ribulose biphosphate carboxylase small subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                 Glucosyltransferase; GTFB; transgenic plant; paper sizing; coating composition; glucan; starch; latex; thermoplastic molecule; amyloplast; vacuole; paper manufacture; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GGTF) B polypeptide having changes at position from I448V, D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, D567T/D571K, D567T/D571K/K1014T, T448V/D457N/D567T/D571K/K779Q/K1014T, Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589D, V1671K/K779C, T589D,

CC (GTF) B polypeptide having changes at position from I448V, D457N, D567T, D571K, X1014T, D457N/D567T D457N/D57TK, D67T/D571K, D67T/D571K, D67T/D571K, D67T/D571K, D67T/D571K, CC D567T/D571K/K1014T, I448V/J457N/D567T/D571K, D67T/D571K, D67T/D571K, CC D567T/D571K/K1014T, I448V/J457N/D567T/D571K/K779Q/K1014T, CC P169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having CC changes at positions from T589D, T589E, N471D, M471D/T589D, and CC N471D/T589E. Also included are a glucan produced by the GTF mutant, CC polynucleotide, a ribonucletic acid sequence encoding the GTF mutant, CC polynucleotide, a ribonucletic acid sequence encoding the GTF mutant, CC polynucleotide, a ribonucletic acid sequence encoding the GTF mutant, CC promoter, a vector comprising the pression cassette, host cell introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant, a paper sixing and/or CC coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, ct the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucan produced with a gene encoding a glucan in a plant. The method comprises transforming a glucan produced plant and inducing expression of the complications to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce a transforming a complications to produce a transforming a produced plant where the vector contains a transit sequence from the produced in the amyloplast of poatuoe a transgenic plant, and glucan in the amyloplast of poatuoe a transgenic plant, and glucan in the produced in the amyloplast of poatuoe a transgenic plant, and glucan in the produced in the amyloplast of poatuoe at techniques, which creating the placen produced by GTF, which utilises biologically friendly. Moreover, glucans also exhibit thermoplastic complete and contains a sequence from th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             07-JUN-1995;

environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTPB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTPB sequence appearing as AAU980: and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20-JAN-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC deficient in starch biosynthesis, transformed with a gene encoding a glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan (paper sizing/coating agent). The vector is useful CC for producing a glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant cell under plant growing CC conditions to produce a regenerated plant and inducing expression of the CC polynucleotide for a time sufficient to produce the glucan in the CC regenerated plant, where the vector contains a transit sequence from CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and CC chlorophyll AB binding protein to produce a transgenic plant, and glucan CC chlorophyll AB binding protein to produce a transgenic plant, and glucan CC glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which CC require input materials that produce chemical effluents, paper CC manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and CC environmentally friendly. Moreover, glucans also exhibit thermoplastic CC properties and impart gloss to the paper during coating step.

CC The present sequence is not shown in the specification but can define information in claim 36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           JP2002114709-A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP136 (FERM P-17566) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosy transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              inhibitory enzyme against water insoluble glucan transferase-B (GTF-B) of Streptococcus mutans -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequence
                                      The sequences (AAR43694-98) are subsequences from GT, they provoke T- and B-cell responses in mammals. The can be used to produce a vaccine comprising 2 of these sequences attached to a peptidyl core matrix. They are useful in producing T-cell responses to the GT enzyme causing a reduction of colonisation or accumulation of mutans steptococcal strains in mammals. The vaccines can be used in preventing dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GT subsequence.

J. Bacteriol. 173.989-996(1991).

II. Bacteriol. 173.989-996(1991).

II. FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGHT TO PLAY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE BECAL OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

II. CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N) = D-fructose + {(1,6)-alpha-D-glucosyl}(N) = D-fructose + {(1,6)-alpha-D-glucosyl}(N) = D-SUBCELLULAR LOCATION: Secreted.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WATER-SOLUBLE GLUCANS (ALPHA 1,6-GLUCOSE). GTF-SI SFORMS OF GLUCANS.

SIMILARITY: TO OTHER GLUCOSYLTRANSFERASES AND SOME BINDING PROTEIN FROM S.MUTANS.

SIMILARITY: Contains 16 cell wall binding repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1301

Bacteriol. 169:4271-4278 (1987).

J. Bacteriol. 169:4271-4278 (1987).

I. PUNCTION: PRODUCTION OF EXTRACELULAR GLUCANS, THAT ARE THOUGHT FUNCTION: PRODUCTION OF EXTRACELULAR GLUCANS, THAT ARE THOUGHT TO PLAY A KEY ROLE IN THE BEVELOPMENT OF THE DESTIAL PLAQUE BECAL OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

I. CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N) = D-fructose + {(1,6)-alpha-D-glucosyl}(N) = D-fructose + {(1,6)-alpha-D-glucosyl}(N) = D-incomposition of the sucrement of the surface of the surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GTF1 STRDO

CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N) = D-fructose + {(1,6)-alpha-D-glucosyl}(N+1).

SUBCELLULAR LOCATION: Secreted.

DISEASE: DENTAL CARIES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MISCELLANEOUS: GTF-I SYNTHESIZES WATER-INSOLUBLE GLUCANS (ALPHA 1,3-LINKED GLUCOSE AND SOME 1,6 LINKAGES), GTF-S SYNTHESIZES WATER-SOLUBLE GLUCANS (ALPHA 1,6-GLUCOSE). GTF-SI SYNTHESIZES BOTH FORMS OF GLUCANS.
